

The public status page

CF Building Approvals — internal reference (Monday-Portal repository)

Reads the board, shows a timeline, needs no login · Updated August 2026

A single public page: reference + site address in, a five-stage timeline out. Unlike the client portal it needs no login, is for anyone holding the paperwork, and **writes nothing** — it reads the board live. Both fields must match before anything shows, answers stop at stage + dates + address, and lookups are rate-limited.

WHAT IT READS FROM THE BOARD

Ref #	The lookup key. A card with a blank Ref # can never be looked up — the client just gets "we couldn't match those details".
Status	Decides the stage. Every label maps to one of the five client stages (or to the Cancelled / On Hold card). A label the page doesn't know shows a safe, vague "In progress" — never a guess.
PORTAL	Written by the client portal's sync as it delivers — ISSUED → READY → DOWNLOADED, or STUCK. On an issued job it refines the wording, and STUCK suppresses the Sent date. The status page only ever reads it.
Received / Job Sent	The dates on the card. A Job Sent cell holding a note instead of a date is never echoed to the client.

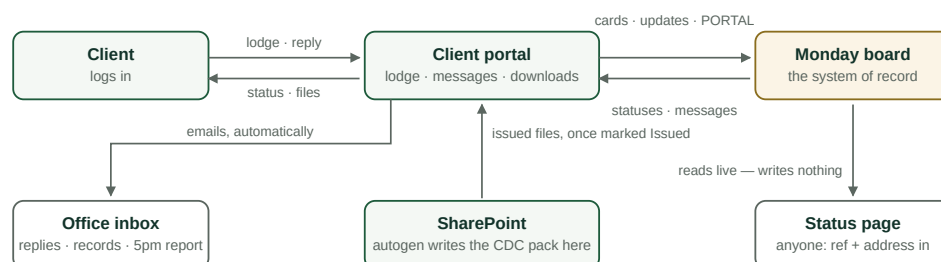

WHEN THE BOARD CHANGES — THE TWO-MINUTE RITUAL

- ✓ **New or renamed Status label?** The page keeps working (the safe "In progress" card) but is vague until the label is mapped. Run `npm run inspect`, add the label to `statusMap` in `lib/config.js`, then `npm test` — a deliberate test fails until every live label is mapped.
- ✓ **New PORTAL label?** Same ritual, in `CONFIG.delivery` — unmapped means an issued job says nothing about delivery.
- ✓ **"Wait" is currently an assumption** — new on the board Aug 2026, no jobs carry it, shown as a neutral "Waiting" card. Settle its meaning, then update the mapping (marked `CONFIRM`).

BOARD HYGIENE THAT SHOWS UP HERE

- **Blank Ref #** — the job is invisible to the page. Older cards have these; fill them as they surface.
- **Same ref on two cards** (revision, copy) — the page shows the most recently updated one.
- **Item name is the address** — a card named anything else can't be matched by the client.

THE LANDSCAPE — WHAT TALKS TO WHAT

Keeping this current: the page's code and README live in the **Monday-Portal** repo; this sheet's master is `docs/collateral/25-status-portal-ops.html` — edit, `node render-pdfs.mjs`, commit. Re-check when a column moves, a label is added, or the delivery states change.
