

How a job flows, start to finish

CF Building Approvals — internal reference

Updated August 2026 · Inspections not covered · Monday board · SharePoint · CDC autogen · client portal · public status page

WHO DOES WHAT

Kacie	Intake, references, folders, assigning, finalising, issuing, and all of Rebecca's admin
Chris	Assesses his own jobs, requests information, finalises and issues
Rebecca	Assessment only — her signature is already on the template
Fiona	Invoicing
Client	Lodges jobs, sends information, downloads
Automatic	Card creation, autogen, portal sync (every 5 minutes), emails, filing, receipts, purge

THE WHOLE FLOW AT A GLANCE

Colour = who acts. The detail for every step is over the page.

- 1

Job comes in — straight onto the board

Three things that stop a job dead. A card with **no reference number** cannot be matched to its SharePoint folder, so nothing reaches the client. A card whose **Client spelling matches no portal client** is invisible — its jobs and messages reach nobody; the admin page lists these under *Unmatched* with a one-click fix. And a job set to **FIR without a FIR: / CLIENT: update** shows the client "further information required" with no detail and sends no email. **FIR - ENG is not part of that loop** — the client is informed, not asked.

WHEN WE NEED MORE INFORMATION FROM THE CLIENT

- 1

Surveyor Chris

Sets status to **FIR** and posts the request on the card's Updates tab beginning **FIR:** (or **CLIENT:**). This loop is for information needed **from the client only**. The prefix works on a card in *any* active status — FIR is what flags "action needed".
- 2

Portal Automatic

Next sync (≤5 minutes) imports the update, shows the job under **Further information required**, then emails the client the request with a link straight to the job. The email is sent by the portal, not Monday, so it can never arrive before the detail is visible.
- 3

Client Client

Signs in, sees exactly what is needed, and uploads it against the job. No email chain.
- 4

Portal Automatic

Posts the reply and files onto the card, **and emails the office** that a reply has arrived — Monday doesn't notify us of updates made with our own token, the email does. The client's job page flips to *Answer sent — it's with us*; a new or reworded **FIR:** note arms the flag again.
- 5

Surveyor Chris

Picks the job back up and carries on.

WHAT HAPPENS ON ITS OWN, AND WHAT DOES NOT

Automatic

- ✓ Monday card created at lodgement, files attached
- ✓ CDC and stamped PDFs generated
- ✓ Issued files copied to the portal
- ✓ "Certificate ready" email to the client
- ✓ Further-information email to the client
- ✓ Office email when a client replies
- ✓ Download receipt noted on the card
- ✓ PORTAL column kept honest as delivery happens — the public status page reads it
- ✓ Correspondence record emailed to the office on first download (7-year file)
- ✓ Cancellation request → card note + office email (final only when we cancel the card)
- ✓ Feedback + weekly pilot dials on Admin → Feedback
- ✓ Sync health + unmatched list on /admin; the 5pm report
- ✓ Files purged three months after first download

Still done by us

- Reference number and folder
- Assigning the surveyor
- The assessment itself
- Writing the **FIR:** request
- Reviewing and finalising the pack
- Clicking Issued
- Invoicing
- Matching new client spellings (one click, /admin)

CHANGED AFTER ISSUE — THE AMENDMENT LOOP

An amendment **never opens a Monday card**. The client lodges it from the job's own page (or **Amend a Job**); the portal emails whoever is in the card's **Certified By** column with the office copied — Rebecca when the column is empty — and the reply happens by email exactly as before. Kacie watermarks and re-issues as usual, then uploads the revised certificate on **Admin** → **Amendments** (no card means no SharePoint sync to collect it). The original card gets one note; the client sees progress on the job itself and both certificates side by side in Downloads. The 5pm report is what notices a quiet one — admin guide (sheet 10) has the full rules and the routing setup.

A JOB FROM START TO FINISH — WORKED EXAMPLE

Mon 6 Jul	Complete Approvals lodge 89 Bannister-Marradong Road — Class 10a steel shed — through the portal. Card created instantly, plans in the Files column.	Client
Mon 6 Jul	Reference 56597 added; folder 89 Bannister-Marradong Road - 56597 created; assigned to Chris.	Kacie
Wed 8 Jul	Assessed. Raft slab engineering missing — request posted as FIR: ; portal emails the client within five minutes.	Chris
Fri 10 Jul	Client uploads the engineering; it lands on the card, office gets the reply email, card moves to New Info Received.	Client
Mon 13 Jul	Assessment completed → Chris CDC ; autogen writes the CDC and stamped PDFs into Issued.	Automatic
Tue 14 Jul	Pack reviewed and finalised; marked Issued . Portal syncs the files, sets PORTAL to READY, emails the client it's ready; they download the same afternoon — the card notes it, PORTAL flips to DOWNLOADED, and the office receives the job's correspondence record for the 7-year file.	Chris
Wed 15 Jul	Invoiced and closed. Anyone with the paperwork — the owner, the shire — can watch all of this on the public status page with just the reference and address.	Fiona

Two newer loops to know. *Cancellation:* a client can request one from the job's page — the card gets a **CANCELLATION REQUESTED** update and the office an email. Pause work and move the card to Cancelled to confirm; **nothing is final until the card moves**. *Rejecting a queued lodgement:* the reason you type shows on the client's dashboard **word for word**, with a Lodge It Again button — write it for their eyes, not the file.

Keeping this sheet current: the master is `docs/collateral/09-job-flow-internal.html` — edit it, run `node render-pdfs.mjs`, commit both. Re-check it whenever a Monday status label is added or renamed (the status page's map needs the same update — sheet 25), a step changes hands, or a new automatic step ships.
