

Client Portal — review & trial week

CF Building Approvals — internal

Tuesday 4 August 2026 · Kacie, Chris, Rebecca, Fiona · Allow 85 minutes

The portal is live and doing real work. We walk it through together, then it's yours for the week — so we find the rough edges before our clients do.

RUNNING ORDER

5 min	Where we're up to What's live, what's still coming, what we're deciding this week.	Chris
15 min	The client's side Signing in, lodging, messages, downloads, resources. What they see — and what they can't. Page 5	Chris
20 min	One job, start to finish A single job walked the whole way through on screen. Stop me anywhere. Page 2	All
10 min	An FIR, worked through Saves us the most time, and most likely to catch us out. Page 2	Chris
10 min	Amendments — this one has changed They no longer touch the board. Affects Kacie, Chris and Rebecca directly. Page 3	All
10 min	The admin dashboard Queue, Clients, Enquiries, Amendments, Content, Settings. Page 6	Chris
10 min	Monday and the CDC autogen What's automatic, what PORTAL is telling you, what still needs a person. Page 4	Chris
5 min	Your trial this week Who does what, and how to tell me what you find. Page 4	All

WHAT THE BOARD NOW TELLS YOU

The PORTAL column answers one question no one could answer before: where is this certificate, actually?

STUCK — it hasn't got there and somebody needs to look. Also on the 5pm report.

What we want out of this week: everyone has used the portal as a client and as staff at least once, and anything that felt wrong or confusing is written down. Ten small problems found now beats a tidy meeting.

ONE JOB, START TO FINISH

AN FIR, WORKED THROUGH

AMENDMENTS — WHAT'S CHANGED

UNTIL NOW

- Opened a **new job on the board**
- Sat there looking like an assessment
- Waited its turn behind real jobs
- Took longer than doing it by email

FROM NOW

- **Never touches the board**
- Emailed to whoever certified it
- You reply “yes” — as you do today
- One note on the original card

HOW ONE MOVES

Client

Lodges it in the portal

Picks the job — including ones we finished years ago — says what's changed, attaches the new drawings.

Automatic

Emailed to whoever certified it

Off the board's **Certified By** column, office copied, with the reason and the documents. Nobody in that column means Rebecca.

Chris

Reply “yes” by email

Rebecca

Exactly as you do today. No system, no button, nothing to learn.

Kacie

Watermark, re-issue, upload it back

The only new step for anyone — **Admin** → **Amendments**. With no card there's no SharePoint sync to collect it.

Automatic

Client emailed, and downloads it

Their original certificate stays valid until then; both sit side by side.

The catch. Because they're off the board, the board can't notice one going quiet — the 5pm report does instead. If you get an amendment email and it isn't yours, say so rather than leaving it.

WHAT RUNS WITHOUT ANYONE

●	●	●	●	●
Every 5 min	45 minutes	3 days	5pm weekdays	Monday 7am
Collects issued packages, emails clients, moves PORTAL, delivers messages	An issued job with no files is flagged STUCK	A ready package still unopened is chased	The report, and the past-jobs lists rebuild	A digest to each client with anything outstanding

AND THE MOMENT IT HAPPENS

A job is lodged	Card created, files attached, client acknowledged.
A client replies	Onto the card, status off FIR, office emailed.
An amendment	Emailed to the certifier. Never on the board — page 3.
A download	Receipt on the card, PORTAL to DOWNLOADED, retention clock starts.
Still a person	Checking the autogen's Word document, PDF-ing it, and setting the status to Issued.

YOUR TRIAL THIS WEEK

You each get a client login too. Please get through this by **Friday**, on a test job rather than a live one.

- ☐ Sign in with the code you're emailed
- ☐ Set a password, sign out, sign back in
- ☐ Lodge a job with plans attached
- ☐ Check it appeared on the board
- ☐ Send a message about a job
- ☐ Answer an FIR with a document
- ☐ Lodge an amendment on a completed job
- ☐ Download a package, open the zip
- ☐ Send a general enquiry
- ☐ Try it on your phone
- ☐ Look at Resources — forms, wind, bushfire
- ☐ Try to break it. Wrong password, huge file

Tell me the same day if something's broken — don't wait for Friday. Write the clumsy things down as you go; you won't remember them later. What you did, what you expected, what happened. **Friday:** fifteen minutes on what everyone found.

WHAT A CLIENT CAN DO

Their sidebar, top to bottom. Any of it can be switched off from Settings while we update it, without taking the portal down.

Dashboard	Every job and what stage it's at, on one screen.
My Jobs	One job in detail — stage timeline, who's assessing, how long it's been with us.
My Messages	A thread per job, newest first. Attachments both ways. Where an FIR is answered.
Lodge a Job	Address, class, description, PDFs — plus anything saved in My Details. Straight onto the board.
Amend a Job	A change to any job we've done — current or long finished. By email, never onto the board.
Downloads	Every package we've issued them, as often as they like.
Info Sheets	The fourteen guidance notes.
Resources	Council forms, wind classification checker, bushfire map check, maps, and all thirty councils.
Site Plan Tool	Draws a compliant site plan for a simple job, rather than us sending it back for one.
Engineering	The engineering checker. Hidden until we switch it on.
My Details	Contact details, and a library of documents they reuse job to job.
Help & Support	How it works, and a general enquiry that reaches us even when it isn't about a job.

AND AROUND THE EDGES

- First sign-in with a one-time code
 - Password reset, same username
 - Unread counts on jobs and messages
- Cancel a job they've lodged
 - Export their job list
 - Works on a phone — most lodge from site

WHAT WE CAN DO

Queue	Lodgements waiting to be accepted. Normally empty — a job goes straight onto the board. Anything here means Monday was down when they pressed Lodge.
Clients	The registry. Issue a login, email the details and one-time code, reset a password, check their SharePoint folder resolves, view the portal as them, remove a client.
Enquiries	Questions with no job behind them; the reply goes back through the portal.
Amendments	Every one lodged, who it went to and why, and where the revised certificate goes back out from.
Content	The welcome guide, info sheets, council forms and engineering sets — new versions any time, no redeploy.
Settings	What's connected, the evening report, Teams notifications, amendment routing, switching client pages on and off.
Turnaround Reports	How long jobs are taking, by class, with the days spent waiting on the client taken out.
Activity Log	Who did what, and when.
Sync Now	Don't wait five minutes.

THE 5PM REPORT — WHAT IT'S FOR

Everything else in the portal reacts to something happening. This is the one thing that looks for something that *should* have happened and didn't — the job that never reaches the client, which is the only failure here that costs somebody a week and never announces itself.

Issued, not delivered	On the board at Issued, nothing in the portal.
Delivered, not told	The portal has it; the email didn't send.
Ready, not opened	Three days and they still haven't looked.
Amendments waiting	Lodged, nothing sent back — the board can't see these.
No certificate	A package with everything except the CDC itself.
Lodged, not on the board	The client believes it's with us.

The one thing to remember: the portal never decides anything. It moves files, tells people, and keeps the board honest about where a certificate actually is. Every judgement is still ours.
