

We've asked for something — here's the fast way back

How to answer an information request so your job keeps moving.

Sometimes an assessment can't continue until we have something further — a missing engineering detail, a dimension, a signed document. When that happens the job pauses, and the fastest way to restart it is through the portal.

WHAT HAPPENS, STEP BY STEP

1 You get an email — the request is in it

The moment we raise a request, the portal emails you with exactly what we need, written out in the message. Your job also shows **Awaiting information** with a "waiting on you" flag.

2 Click through to the job and reply

The email links straight to the job's messages. Type your reply and attach the documents — PDFs, up to 25 MB per message.

3 That's it — it files itself

Your reply and documents land directly on the job in front of the surveyor, the status moves on its own, and assessment resumes. No follow-up email needed.

WHY REPLY IN THE PORTAL RATHER THAN BY EMAIL?

- ✓ **It can't get lost.** Your documents attach to the job itself, not to an inbox that's on leave.
- ✓ **It's faster.** The surveyor sees it the moment it arrives, already filed against the right job.
- ✓ **Everyone can see it's done.** The "waiting on you" flag clears, so your whole team knows it's back with us.

The clock restarts when the last document arrives. Most jobs are certified within 3–4 business days of everything being received — so the sooner the request is answered, the sooner your certificate is issued. If anything in a request is unclear, reply in the portal and ask; that reaches us the same way.

Open your jobs

Scan the code, or use the link in any email we've sent you — it goes straight to the job it's about.
