

Your first sign-in

Five minutes, once — then it's just a username and password.

The email this came with holds your **username** and a one-time **setup code**. Here's what to do with them, and what you'll find once you're in.

THREE STEPS, ONCE ONLY

- 1 Press *Set up my login* in the email**
 It opens the portal on the **First time** screen with your username already filled in. (Typing the address yourself instead? Choose *First time* on the sign-in page.)
- 2 Enter the setup code from the email**
 It works once and then dies — that's what makes it safe to send. If it's expired by the time you use it, press *Forgot password?* and a fresh one comes to this same address.
- 3 Choose your own password**
 We never see it and can't read it back. From now on you sign in with just your username and that password.

WHAT YOU'LL SEE WHEN YOU'RE IN

Dashboard & My Jobs

Every job your company has with us — what's ready to download, what's with us, and anything waiting on you, each showing when it was lodged. One login covers your whole team.

Lodge a Job

Address, the structures (pick them from a list — the description writes itself), drawings and engineering. It lands straight on our board — and doing the same job at a new address later is one press of *Lodge Similar*.

My Messages

If we need something further you'll get an email, and the request sits on the job itself. Reply and attach documents there — it files itself in front of the surveyor.

Downloads & Tools

Issued certificates as one package, re-downloadable for three months. Plus free checks under *Tools* — wind class, soakwells, bushfire, a site-plan drawer — that answer most questions before you'd have to ask us.

Stuck at any step? Ring 1300 029 074 and we'll do the first sign-in with you on the phone — it genuinely takes two minutes. There's also a full guide under **Info Sheets** once you're in.
