

What Your Site Plan Needs to Show

The single most common reason a job comes back to you.

More jobs are held up by an incomplete site plan than by anything else. Nothing here is unusual — it's simply everything we have to see before an assessment can be finished.

WHAT WE NEED TO SEE

- ✓ Lot boundaries, dimensioned
- ✓ The proposed structure, dimensioned and located on the lot
- ✓ Setbacks from the structure to **every** boundary
- ✓ Setback to the existing dwelling where they are separate
- ✓ All existing structures — sheds, patios, pools
- ✓ North point and the street frontage
- ✓ Easements, sewer and drainage where they affect the works
- ✓ Scale, or a note that the plan is not to scale

COMMON REASONS WE COME BACK

- ✗ Setbacks shown to some boundaries but not all
- ✗ The structure dimensioned but not located on the lot
- ✗ An existing shed or patio left off, so site coverage can't be checked
- ✗ An easement the works sit over not shown

If you're not sure whether something matters, show it. A plan with too much on it has never delayed a job. A plan missing one dimension routinely does.
