

Before the first client goes on

Work top to bottom with a pen. Every box ticked once, in order, and the portal is ready. Page 1 is the plumbing; page 2 is the client journey, end to end.

1 · ENVIRONMENT & SECURITY

- ☐ Vercel env vars all present: **AUTH_SECRET**, **MAIL_FROM** (**proven — FIR test worked**), **OFFICE_EMAIL**, **RETENTION_MONTHS=3**, Supabase keys, Monday token, Graph IDs + secret.
- ☐ Admin passcode is set, is not "demo", and /admin signs in with it.
- ☐ Supabase migration ran with *"Success. No rows returned"*.
- ☐ Supabase → Storage: the **issued** bucket shows **Private**.
- ☐ Signed in as the test client, edit the address bar to another job's ref (/jobs/12345) — you get "not found", never someone else's job.
- ☐ Six wrong passwords in a row — the throttle message appears and offers the reset path and phone number.
- ☐ Graph client secret expiry noted in your calendar (24 months from creation) — it takes emails and file-pulls down silently when it lapses.

2 · THE MONDAY LOOP

- ☐ /admin shows **Sync healthy**, run within the last 10 minutes, without pressing anything (proves the 5-minute cron).
- ☐ On a **test card**: post an update starting FIR: — it appears in the portal *and* the email arrives (**done — working**).
- ☐ Same test with CLIENT: prefix.
- ☐ An update *without* a prefix stays internal — never reaches the portal.
- ☐ Reply from the portal — the reply lands on the Monday card as an update, and the office notification email arrives at OFFICE_EMAIL.
- ☐ Rename a test card's client to a misspelling — it appears under **Unmatched Monday clients** in /admin; resolve it; jobs arrive on the next sync.

3 · LODGEMENT

- ☐ Lodge a job with small PDFs — the card is on the board *instantly*, files sit in the **Files column**, and the job page shows "What you've sent us".
- ☐ Lodge again with a big set (over ~5 MB total) — the direct-upload path, with the progress bar, succeeds and the files reach the card.
- ☐ Try a Word document — the friendly "we can only accept PDFs" message appears and nothing is lodged.
- ☐ Try over 40 MB — refused with the "email the biggest ones" message.

The client journey, end to end

4 • FURTHER INFORMATION ROUND-TRIP

- ☐ Set the test card to **FIR** — the job moves into **Action required** with the amber "With you since" line.
- ☐ Reply with an attachment — it lands on the card, and the status question answers itself on the job page.

5 • ISSUE & DOWNLOAD

- ☐ **Files first:** certificate package into the job's SharePoint folder, *then* flip the card to **Issued**. /admin shows the green "*In the issue hold*" note; roughly 10–20 minutes after the flip (the 10-minute hold, plus sync cycles and OneDrive settling) the job shows **Ready to download** and the certificate email arrives. The hold is the undo — pull a card back off Issued inside it and the client never knows.
- ☐ **Deliberately do it wrong once:** flip a second test card to Issued with an *empty* folder — after the hold, /admin shows the amber "*Issued on Monday, but no files found*" warning. Add the files; next sync delivers and emails. (This is how you'll tell if an issue "didn't work".)
- ☐ Download the package — it opens, it's complete, every document stamped.
- ☐ The **download receipt** appears on the Monday card.
- ☐ "Download again" works, and the retention countdown shows under Downloads.

6 • AMENDMENTS

- ☐ Lodge an amendment against the test job — a fresh card appears, linked to the original, and shows under "What you've sent us" as an amendment.

7 • CONTENT

- ☐ The six council forms (BA1, BA2, BA5, BA13, BA19, BA22) uploaded via /admin.
- ☐ Resources links click-through done — especially the ones flagged // confirm in the code.
- ☐ All 14 info sheets open on a phone.
- ☐ Guidance notes 08–14: figures verified by the registered surveyor.
- ☐ Engineering checker: toggle **off** unless its link is ready.

8 • HOUSEKEEPING, THEN GO

- ☐ Delete the Monday test cards; disable the test client's login in /admin.
- ☐ Activity log (/admin/audit) shows your test downloads and actions.
- ☐ Reports page loads and the turnaround numbers look sane.
- ☐ Kacie and Rebecca briefed — job-flow (09) and admin guide (10) in hand.
- ☐ Incident card (11) printed and by the desk.

- ☐ First client's welcome: login issued in /admin, first-job email (18) filled and ready to send on their next issued certificate.
- ☐ Know the rollback: Vercel → Deployments → previous build → **Promote**. Sixty seconds, no code.

The one habit that matters after go-live: glance at the /admin sync banner each morning. Green and recent — everything downstream is working. Anything amber or red tells you exactly what to fix before a client notices.
